Ankit Chand

GENERATIVE AI ENGINEER · DATA SCIENTIST · AGENTIC AI

chand07ankit@gmail.com · linkedin.com/in/ankitchand007 · github.com/chandankit · ankit-chand-portfolio.vercel.app · India

Data Scientist turned Generative AI engineer. Nearly three years of industry data science — entity extraction for e-commerce search, product-trend analytics and GCP model pipelines — and, since mid-2024, hands-on work designing multi-agent LLM systems with Python, FastAPI, Microsoft AutoGen and Azure OpenAI.

TECHNICAL SKILLS

Data Science & Machine Learning	Python, Pandas, NumPy, Scikit-learn, Statistical Analysis, Feature Engineering, Model Evaluation, Regression & Classification, Random Forest, XGBoost & LightGBM, Time-Series Forecasting (SARIMA, ETS), NER with CRF, Clustering, Deep Learning (CNN, RNN, attention), TensorFlow / Keras, PySpark, SQL
Generative AI	Large Language Models (GPT-4o, GPT-4), Prompt Engineering, Retrieval-Augmented Generation (RAG), Embeddings, Vector Databases (FAISS, ChromaDB), LangChain, Azure OpenAI, OpenAI API, Structured Outputs (JSON, Pydantic), LLM Testing with Mock Clients, Claude & Claude Code, Hugging Face, Mistral
Agentic AI	Multi-Agent Systems, Microsoft AutoGen, Agent Orchestration, Tool / Function Calling (ReAct), Intent Routing & Clarification, Guardrails & PII Redaction, Conversational AI, Workflow Automation, Multi-Agent Collaboration, Context, State & Memory Management
Backend & Engineering	FastAPI, Server-Sent Events (streaming), Flask, REST APIs, Pydantic, asyncio & Concurrency, Streamlit, Docker, pytest & Test-Driven Development, Git, SQLite, MySQL, PostgreSQL, AWS (S3), Azure, GCP (BigQuery, Dataproc, App Engine, Composer)

PROFESSIONAL EXPERIENCE

Data Science Intern — Unified Mentor Private Limited · Internship — Oct 2026 – Present

- UAC Care Load & Placement Forecasting: built time-series forecasts with SARIMA, ETS, Random Forest and Gradient Boosting models; halved the 4-week forecast error against the baseline.

Generative AI & Agentic AI — Independent Projects — Independent Projects & Specialization · Independent — Jun 2024 – Oct 2026

- Designed and built multi-agent LLM systems end to end — orchestration, ReAct tool calling, intent routing with clarification, guardrails, PII redaction and streaming APIs — using Python, FastAPI, Microsoft AutoGen and Azure OpenAI.
- Backed each system with automated test suites that run offline against deterministic mock LLM clients, so routing, guardrail and tool changes are regression-checked without API calls: 214 tests for NexusAI and 357 for IntelliHub.
- Earlier builds (2024–25): RAG question answering over medical-research PDFs (LangChain, OpenAI embeddings, FAISS, AWS S3), a teachable AutoGen metadata extractor (Flask, Azure OpenAI) and an AutoGen code-generation agent team.
- Completed Anthropic Academy courses (Claude Code in Action, Introduction to Agent Skills, Claude with Amazon Bedrock) and a Udemy course on AutoGen agent teams; pursuing Great Learning's PG Program in Data Science with Generative AI.

Data Scientist — Retisio India Pvt. Ltd. — Sep 2022 – May 2024

- Search Intelligence Tool (SIT): built a Conditional Random Field (CRF) named-entity recognition model in Python that extracts entities from user search queries, sharpening query understanding and result relevance.
- Built the entity-identification module and owned the supporting data-preparation pipeline: feature engineering, noise reduction and spell-checking.
- Recommendations Engine (RXE): analysed time-series product-view and purchase data, historical sales, customer feedback and ratings to surface trending products, selecting the top 500 SKUs for further insight.
- Deployed and scheduled model workflows on Google Cloud (Cloud Composer / Airflow, App Engine), working with REST APIs, MySQL, Git and Jira.

Data Scientist — AIE Software India Pvt. Ltd. Sep 2021 – Sep 2022

- Delivered data-science solutions over high-dimensional text and image data, from requirements gathering and gap analysis through modelling and deployment.
- Gathered, analysed and documented business requirements, working within both Agile (Scrum) and Waterfall delivery models.

KEY PROJECTS · CASE STUDIES AT ANKIT-CHAND-PORTFOLIO.VERCEL.APP/PROJECTS

NexusAI · Independent · 2026

A multi-agent assistant where a MasterOrchestrator sends each turn to one or more of eight GPT-4o specialist agents. Each specialist runs a ReAct tool-calling loop over 31 tools, and the answer streams as typed events to a Streamlit UI and to an Android app through a FastAPI/SSE gateway.

Stack: Python, asyncio, Azure OpenAI (GPT-4o), Pydantic, FastAPI, Server-Sent Events, Streamlit, SQLite

IntelliHub · Independent · 2026

A multi-agent intelligence platform. A plain-Python ReAct-style planner decides which domain agents to run, executes them concurrently, and merges their results into one briefing with sources, a status and token cost. Each domain agent wraps a Microsoft AutoGen AssistantAgent that calls its own tools.

Stack: Python, asyncio, Microsoft AutoGen, Azure OpenAI (GPT-4o), Pydantic, SQLAlchemy / SQLite, ChromaDB (optional), PyMuPDF

RAG-Powered QA for Medical Research · Independent · 2024 – 2025

Automates question answering and summarisation over medical-research PDFs stored in AWS S3. Text is extracted from each PDF, embedded with OpenAI embeddings and indexed in FAISS; user questions retrieve the most relevant passages, which GPT-4 uses to answer.

Stack: Python, LangChain, OpenAI embeddings, GPT-4, FAISS, PyPDF2, AWS S3 (boto3), REST API

EDUCATION

Post Graduate Program in Data Science with Generative AI
Great Learning · Pursuing

Post Graduate Diploma in Data Science
IIIT Bangalore · Completed March 2020

Bachelor of Technology (B.Tech)
Lovely Professional University, Punjab · Completed

Languages: English, Hindi, Odia, Bengali

CERTIFICATIONS

Claude Code in Action — Anthropic Academy
